

Release Notes aspdotnetstorefront versions – 10.0.15 & 10.0.16

New Features

- Added [revision support for Topics](#) (topics are now backed up in the admin for easier restoration)

Feature Updates

- Improved Search relevance when Full-Text search is enabled
 - Results are ordered as follows:
 - Products matching all search terms
 - Products matching any search terms
- Various enhancements to Avalara tax integration (currently not applicable to eRATEX users)
- Sitemap now works with MoreStores
- Sitemap feed now works with MoreStores

[Data Retention](#)

To aid in complying with the [European General Data Protection Regulation \(GDPR\)](#) AspDotNetStorefront now offers a data retention feature.

- **User-Initiated Anonymization** - When Data Retention is enabled on a customer's storefront account page it will include a Remove Account button.
- **Automatic Purging of Aged User Data** - The admin Database Maintenance page includes a checkbox "Purge aged user data". When checked and maintenance is run aged user data is purged (anonymized).
- **Data Retention Privacy Policy Topic** - Topic: *dataretentionpolicy* contains default verbiage pertaining to GDPR and data retention.

Sitemap Performance Improvements

- We've made substantial performance improvements to the Sitemap. As a result of this change, the *page.sitemap.xml.config* Xml Package has been removed. Any customizations will need to be transferred to the new Razor view at *Views\SiteMap\SiteMap.cshtml*

Developer Updates

- Upgraded .NET Framework to version 4.7.2
- Fixed all build warnings

Misc.

- "[Monthly Maintenance](#)" renamed to "Database Maintenance"
- Added support for the "FedEx International First" [Real Time](#) shipping method

Resolved Security Issues

- [Signifyd](#) now sends only the 6-digit BIN portion of a credit card number instead of the full credit card number
- XSS vulnerability on Checkout page has been fixed
- Open redirect on Site Disclaimer page has been fixed

Resolved Code Issues

- Obsolete *ShoppingCart* methods attributes say to use *CartItemManagementProvider* instead of *CartActionProvider* (developer note)
- A Billing address is no longer required when it shouldn't be
- Admin 'Re-release download' button is now always available on orders
- Editing a recurring variant in the admin will no longer have an enabled Delete button
- Long product names will no longer fail the checkbox selection when adding a Product Requirement on a Promotion
- The sitemap header tags have been corrected (now use h2 tags)
- Large popup images now load if the product name contains special characters
- Adding to cart now works for multi-variant products on multi-variant xml packages when a variant has size/color attributes
