eRATEX 1.9
Release Notes

Shopping Cart Feature Updates
- Added <u>Output Caching</u>* for significantly increased page load speeds for the homepage, entity pages, product pages and topics
    - Output caching can be disabled by setting OutputCaching.Enabled to false
    - Output caching duration can be configured by the setting OutputCaching.Duration. The default duration is 86400 seconds (24 hours)
- Added a WYSIWYG (What You See Is What You Get) <u>Inline HTML Editor</u>* which allows admins to select and EDIT string resources and topics directly on a page
    - Inline Editing can be disabled by setting InlineEditing.Enabled to false
    - Inline Editing does not support multiple locales and is disabled for stores with more than one locale.
- Added the ability to sign-up and setup <u>Avalara Avatax</u>* from the admin console
    - In the Configuration menu under Taxes click on the "Automate Taxes - Avalara" link. You will be redirected to avalara.aspx and click on the orange "Get a Free Trial" button to sign up.

*Hyperlinks above will take you to detailed Help pages for each feature.

- Upgraded pagination to be <u>WCAG</u> compliant
- A confirmation notification is now displayed to customers when they request a password reset
- Added missing content prompts for authentication pages
- Free shipping now works with custom shipping methods
- Hidden terms are no longer accessible in booklist.aspx
- Pre-order courses now display when students are required to authenticate
- Promotions using category filter IncludeChildren now display the discount flag
- Removed semicolon showing up at the bottom of every page
- The credit card payment method is automatically selected when it's the only payment method available
- The order confirmation page now displays correctly when a customer completes an order with any payment method
- The course list builder no longer crashes when all terms are set to display or hidden
- Updated the order history in the Account page to display the correct ISBN for eBooks
- Updated the receipt to display correct product SKUs
- Variant images now display when selecting a variant from the dropdown on product pages
- Fixed a bug with the address company field length
- Fixed a bug with address verification not working for some addresses
- Fixed a bug with pricing for the Bronto Integration including incorrect discount amounts
- Fixed a bug with the RATEX.AuthUsingNewBookPrice setting and now new and used book prices and subtotals are displayed

- Fixed a bug with the Student Schedule File Import where "No courses were found for the Student ID and Term you entered."
- Fixed an issue on entity pages (Category, Department, Manufacturer) where the items per page selected by the customer reset to the default items per page when paging
- Fixed an issue with incorrect no images displaying in an xml package
- Fixed an issue where the VR payment method was incomplete when paying with ARCharge and both a preorder item and a standard item were on the same order.
- Course_GET5 VERBA calls are now logged properly

Admin Feature Updates

- Added a list of available admin forms per admin roles
- Added the email field to the Manage Ratings form
- Added support to search contacts by first and last name in the Manage Contacts form
- Booklist now checks for current term when importing custom path list
- Custom order data now displays in the Order Details form
- The configure test mode feature now works as expected for TouchNet Hosted payment gateway in the Wizard form
- The multi-image manager now always displays in the Edit Product form
- Updated pre-order conversion to default textbook selecting to lowest price instead of most stock
- Fixed various issues preventing the conversion of pre-orders
